DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-10, drawn to a vehicular steering operation device with throttle controls, classified in class 180, subclass 335.
 - II. Claims 11-12, drawn to methods of controlling speed of a vehicle with steering operation device throttle controls controlling vehicle speed, classified in class 180, subclass 333.
 - III. Claim 13, drawn to methods of controlling speed of a vehicle with steering operation device throttle controls controlling the throttle and braking, classified in class 477, subclass 183.
 - IV. Claims 14 and 15, drawn to methods of controlling a vehicle speed using a steering operation device with methods of controlling the throttle opening, classified in class 123, subclass 399.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions 1 and 2-4 above are related as process and apparatus for its practice.

The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the processes does not necessarily have to be practiced using the apparatus claimed as invention 1.

3. Inventions 2, 3 and 4 are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions each perform a different function. Invention 2 claims a method for controlling vehicle speed through the amount of difference between two accelerator handles. Invention 3 claims a method for controlling vehicle speed through both acceleration and controlling braking. Invention 4 claims a method for controlling vehicle speed through controlling the position of the throttle opening.

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

5. A telephone call was made to Richard Schwaab on October 31, 2005 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tiffany Webb whose telephone number is 571-272-2797. The examiner can normally be reached on 8-4:30 M-F.
